-! FUNCTION: Makes part of TFIID is a multimeric protein complex that
-! FUNCTION: Makes part of TFIID is a multimeric protein complex that
-! FUNCTION: Makes part of TFIID is a central role in mediating promoter responses to various
activators and repressors. Potentiates transcriptional activation
by the AF-2S of the retinoic acid, vitamin D3 and thyroid hormone.
-! SUBUNIT: FIID is composed of TATA binding protein (TBP) and a
number of TBP-associated factors (TAF9). Component of the TFTC-HAT
complex, at least composed of TAF5L, TAF6L, TAD31L, SUPT3H/SPT3,
TAF2/TAFII150, TAF4/TAFII135, TAF5/TAFII100, GCNSIZ/GCNS, TAF10

    J. Bacteriol. 176:1488-1499(1994).
    -!- FUNCTION: Could regulate beta-glucan synthesis. Overexpression provides resistance to Hm-1 killer toxin.
    -!- SUBCELLULAR LOCATION: Type I membrane protein (Probable).
    -!- PTM: Could be O-glycosylated in the serine/threonine-rich domain.
    -!- SIMILARITY: SOME, TO YEAST MSB2.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             POTENTIAL.
